

THE WORLD'S LARGEST FULL-TEXT DATABASE OF PUBLICATIONS IN MANUFACTURING ENGINEERING

Academic and special libraries can now offer researchers online access to the world's largest full-text database in manufacturing engineering. As the leading professional society supporting manufacturing education, the Society of Manufacturing Engineers issues a range of publications on best practices and new technologies in manufacturing engineering. SME Source brings many of these publications together in a single, interactive database, with tools and integration features to simplify research and learning.

MULTIPLE FORMATS — ONE INTERFACE

SME Source combines four publication formats with a total of more than 3,000 individual book chapters, journal articles, and technical papers:

TOOL AND MANUFACTURING ENGINEERS HANDBOOKS

The database is anchored by the nine-volume *Tool and Manufacturing Engineers Handbook* series, a trusted source for practical process descriptions, operating parameters, and application examples. The combined volumes include 184 individual sections, over 7,000 pages.

BOOKS

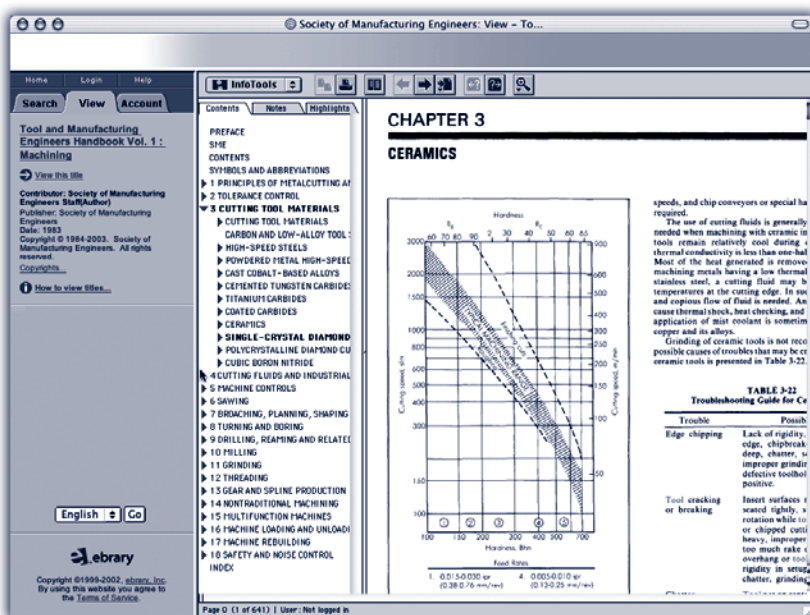

SME source includes many recent SME books and will be augmented by new titles as published. Sample titles include: *Fundamentals of Tool Design, 5th Edition*, Spittler et al, 2003; *A Guide to High-performance Powder Coating*, Utech, 2002; *Lean Manufacturing for the Small Shop*, Conner, 2001.

JOURNALS

The peer-reviewed *Journal of Manufacturing Systems* (JMS) is a leading source for scientific thinking on manufacturing systems theory, design, analysis, and control. The *Journal of Manufacturing Processes* (JMP) provides researchers peer-reviewed articles on, among other processes, deformation, injection molding, material removal, precision engineering, rapid prototyping, and surface treatment. SME Source includes the full run of both journals, JMS from 1982, JMP from 1999. New issues added every quarter.

TECHNICAL PAPERS

SME publishes hundreds of technical papers annually detailing the theories, applications, and innovations in manufacturing. SME Source contains 2,500 technical papers from 1990 forward, including publications of SME's Computer and Automated Systems Association. Up to 200 new technical papers will be added during 2004.

ACADEMIC APPLICATIONS

SME Source supports curricula in a range of ABET and NAIT-accredited associates, bachelors and masters degree programs in engineering and industrial technology, including:

- Manufacturing Engineering or Technology: Applied Materials Science, Applied Quality Science, Industrial Environmental Technology, Plastics, Systems Engineering, Tool and Die
- Industrial Technology: Automated, Computer-Aided, Management, Manufacturing Information Technology, Manufacturing Materials and Processes, Robotics

PROFESSIONAL APPLICATIONS

SME Source is also an invaluable resource for professionals in many fields of manufacturing and engineering, including:

- Ergonomics
- Forming and fabricating
- Industrial finishing
- Industrial management
- Machining
- Manufacturing automation
- Manufacturing research
- Material handling
- Rapid manufacturing
- Tool and die design

UNIQUE EBRARY PLATFORM

Hosted in ebrary's unique platform, the SME Source database offers a number of benefits to subscribing institutions and users, including:

- Simultaneous, multi-user access to each publication—no seat or “check out” limitations.
- New books, journal issues, and technical papers added quarterly at no additional cost.
- Bibliographic and full-text searching within a publication or all publications.
- Browse menu for viewing publications by title, author, or publication date.
- ebrary's streaming PDF technology, which enables instant, dynamic access to all pages of the selected publication.
- ebrary InfoTools™ and other interaction features that facilitate online reading, including dynamic cross-referencing with other networked reference resources, text highlighting, annotating, and bookmarking.
- Delivered via a custom, institutionally branded website that ebrary creates, hosts, and maintains and that may be integrated with other ebrary databases.
- MARC 21 records provided with links in the 856 fields directly to books.
- Reporting tools and usage statistics to ICOLC standards.

AFFORDABLE PRICING

SME Source is available by annual subscription under affordable pricing based on library type and size. Discounted rates may be available through consortia and regional networks.

To request trial access, visit www.ebrary.com/trialsignup. For a price quote, contact ebrary at sales@ebrary.com.
